The level indicator
for **gas cylinders**

The level indicator for gas cylinders

The universal GASLEVEL® from Gaslock is the ideal accessory for camping, barbecues, handicrafts and for the use of gas-powered outdoor heaters. In seconds it will display the fill levels in standard commercial 20lbs propane or butane cylinders.

And this is how it works:

Just push the Gaslevel® onto the surface of the gas cylinder in vertical motion. Repeat the procedure along the cylinder. The indicator light will change from red to green and vice-versa to show the gas level in the cylinder.

IN THE EMPTY SECTION: **RED INDICATOR**

IN THE FILLED SECTION: **GREEN INDICATOR**
